

Invitation to participate in market study on energy efficiency and GHG emission intensity of logistics sites

I am contacting you with reference to the market study "Energy efficiency and GHG emission intensity of logistics sites" that I am coordinating, launched within the research initiative "German, Italian & Latin American consortium for resource efficient logistics hubs & transport".

The research bases on previous studies in Italy, Germany and Latin America and aims at studying the energy efficiency and GHG emission intensity of logistics sites at global scale. We consider logistics sites such as warehouses, distribution centres, transshipment sites, and terminals; examining (i) the solutions in use to reduce the environmental impact, and (ii) consumption and GHG emissions related to the site as well as to the activities performed. Our previous research outlined particular interest from industry and the work is accompanied by and support the ongoing discussions related to international standardisation of GHG emissions quantification of logistics chains.

Therefore, I would be very pleased if your company were available to participate by filling in the questionnaire that I am attaching (1 completed questionnaire = 1 site, you can also fill out more questionnaires, one for each logistics site; in case of participation with multiple, e.g. more than 5 sites, please, contact us separately).

The data will be treated confidentially and processed in an aggregated way. Participating companies receive their individual result as well as overall outcomes of the global study.

Data collection is ongoing and will be concluded by the end of June.

Looking forwards to receiving your kind reply. In the meantime, I am available for further clarifications.

Please send the file to Kerstin Dobers: <mailto:kerstin.dobers@iml.fraunhofer.de>

Thank you in advance.

Best regards

Kerstin Dobers
